

H1 of 2021 in numbers

As a new world of hybrid (online + offline) interactions begins to emerge, so do new attack opportunities. Here are the top findings, straight from our report.

Banking and eCommerce reach digital maturity

Online traffic continued to grow as customers leaned into hybrid experiences that combine online and offline activities.

more purchases among major **retailers** compared to H1 2020.

increase in **money transfers** within 2021.

traffic growth across **event-ticketing** companies compared to 2020 average.

...but attackers are close behind with creative schemes

Attackers have responded by refining and specializing their attacks. More creative techniques and better quality credentials should be a priority concern for all industries.

of **credential stuffing** attack attempts had correct credentials – which would have opened the account. This is record-breaking, up from the 1.9% credential success rate in 2020.

year-over-year increase in **card cycling** attempts at checkout.

Multi-prong credential stuffing attacks

Attackers use different user touchpoints on a platform to artificially boost credential success rates. These creative multi-prong or multi-touchpoint attacks are engineered to improve their chances of success.

And that's not all
